

Discrete
5e-05 s.

powergui

Charging Current:

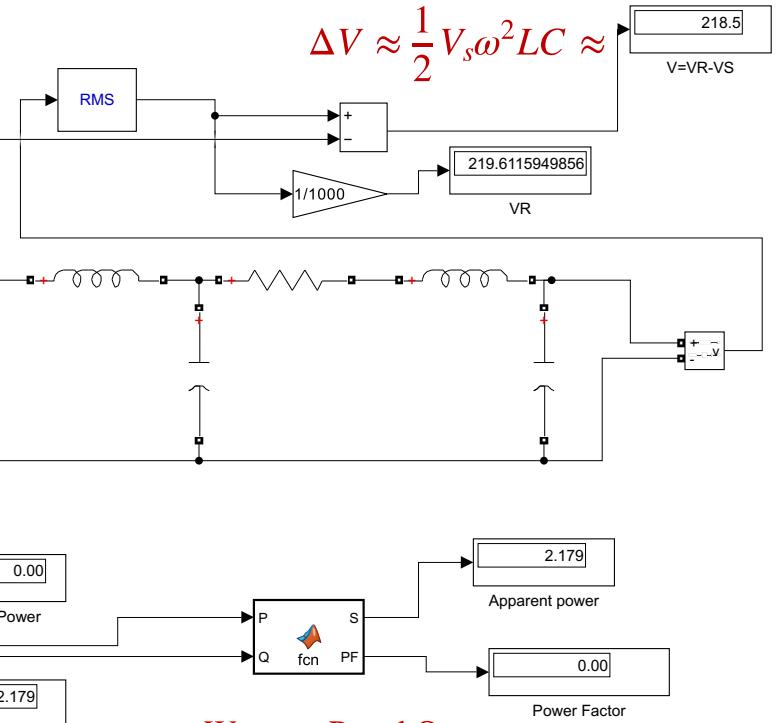

$$I_{charging} = \frac{V_s}{X_c} = V_s \cdot 2\pi f C \approx 3.31$$

Case 2 at no load ($0.04 \mu F$)

Ferranti Effect Voltage Rise:

$$\Delta V \approx \frac{1}{2} V_s \omega^2 L C \approx 218.5$$

We now P and Q

so

$$S = \sqrt{P^2 + Q^2}$$

Power Factor:

$$PF = \cos(\phi) = \frac{P}{S}$$
